

ABSTRACT

Arrangement for division of animals into groups and transfer of groups of animals to a stunning apparatus. An oblong corridor section in which animals can be driven from an entrance end to an exit end. A division gate is provided in the corridor section between the entrance end and the exit end, in such a way that the corridor area between the division gate and the exit end has room for a number of animals corresponding to a group size. A transfer section is placed at the exit of the corridor section, having room for a number of animals corresponding to the group size.
